Die nuutste SDL nuus...

Die navorsers van die NNS befondsde projek, "Innoverende strategieë om meerjarige vraagstukke in Wetenskaponderwys in Suid-Afrika aan te spreek", het Vrydag en Saterdag 23-24 Maart 2018 'n baie suksesvolle beplanningssessie by die Elgro River Lodge gehad. Een van die nuwe tendense in Natuurwetenskappe-onderwys is 'n verskuiwing van STEM-onderrig na STEAM (Wetenskap, Tegnologie, Ingenieurswese, Kuns en Wiskunde)-onderrig. Die fokus van die navorsing van hierdie groep is op laasgenoemde. Drie van die lede beplan 'n besoek aan die gesogte Lincoln Center Education Summer Forum in New York City vir die kort kursus "Aesthetic Education Immersion" van 9-13 Julie 2018.

The researchers of the NRF funded project "Engaging Pedagogies to address perennial issues in Science Education in SA" had a very successful planning retreat at the Elgro River Lodge on Friday and Saturday 23-24 March 2018. One of the new trends in Natural Sciences teaching is a shift from STEM teaching to STEAM (Science, Technology, Engineering, Arts and Math) teaching. The focus of the research of this group is on the latter. Three of the members will visit the prestigious Lincoln Center Education's Summer Forum in New York City for the short course "Aesthetic Education Immersion" from 9-13 July 2018.
